EJL Wireless Research Announces Second Report in New Series of Research Reports Focused on BTS Transmission Lines

Global Jumper Cable Market Declined 27% in Shipment Volumes in 2010 as 1/2" Superflex Cables Remain Preferred Solution.

2m-5m Segment Accounted for 55.7% of 2010 Shipments

Salem, NH, November 21, 2011: EJL Wireless Research is announcing the second report within its new and proprietary series of research reports focused on the RF transmission lines market that connects wireless macro cell base stations (BTS) and the BTS antennas. The second report focuses on the global jumper cable market which is the primary solution that interfaces the feeder cables and remote radio units (RRUs) to the BTS antenna.

"Similar to our findings in the feeder cable report, the jumper cable market dropped 27% year over year in total volumes (measured in units of cables) in 2010. In terms of jumper cable lengths, the 2m-5m jumper cable product segment remained the largest in 2010, followed by the <2m and the >5m segments" said founder and President, Earl Lum.

Weak end market demand in Asia Pacific (China and India) and Africa offset strong demand in North America in 2010.

"In revenue terms, the 1/2" superflex jumper cable market accounted by 65% of overall market revenues in 2010 followed by the 1/2" standard jumper cables. Our research confirms that the 7/16 DIN straight male-male jumper cable segment remains the predominant jumper cable configuration at 69% of total shipments in 2010," says Lum.

The report is currently available for purchase and information can be downloaded at www.ejlwireless.com.

About EJM Wireless Research

EJM Wireless Research provides proprietary, accurate and cutting-edge market analysis and consulting services on the wireless technology ecosystem and defense and aerospace industries. The firm's wireless infrastructure research division focuses on all vertical elements of the wireless ecosystem including mobile subscribers, mobile operators, mobile handsets, mobile infrastructure and mobile content. In addition, the firm provides analysis across horizontal technology suppliers including RF semiconductor materials, RF semiconductor/components, subsystems and OEMs. Similarly, the defense and aerospace division focuses its efforts on the ecosystem supporting UAV and airborne platforms and subsystems. Our goal is to provide our clients with mission critical market analysis and information.

EJM Wireless Research believes it has a corporate responsibility, both local and international, in giving back to the community. Please visit our website for more information about the charitable organizations it supports at: www.ejlwireless.com/corporate_responsibility.html.

EJM Wireless Research is managed by Earl Lum. Mr. Lum has 18 years of experience within the wireless industry including 8 years as an Equity Research Analyst on Wall Street covering the global wireless industry. The company is headquartered in Salem, NH. For more information about EJM Wireless Research, please visit the company's websites at www.ejlwireless.com or www.ejldefense.com.
